

- The primary data set is made up, but it is showing donations made to various charities across the United States and parts of Canada by Julie's Cookies (a fictional company).
- There are 4 visualizations: a filled map of what states and providences have charities that were donated to, a treemap showing the charities ordered and sized by the amount of donations made to them, a horizontal bar chart showing which how much money was transacted through the three banks that were used, and a horizontal bar chart showing the number of transactions per each bank.
- I only included charities that had more than \$75,000 in the treemap because there were so many little charities that it was too much to look at. However, the other visuals still show the full dataset.

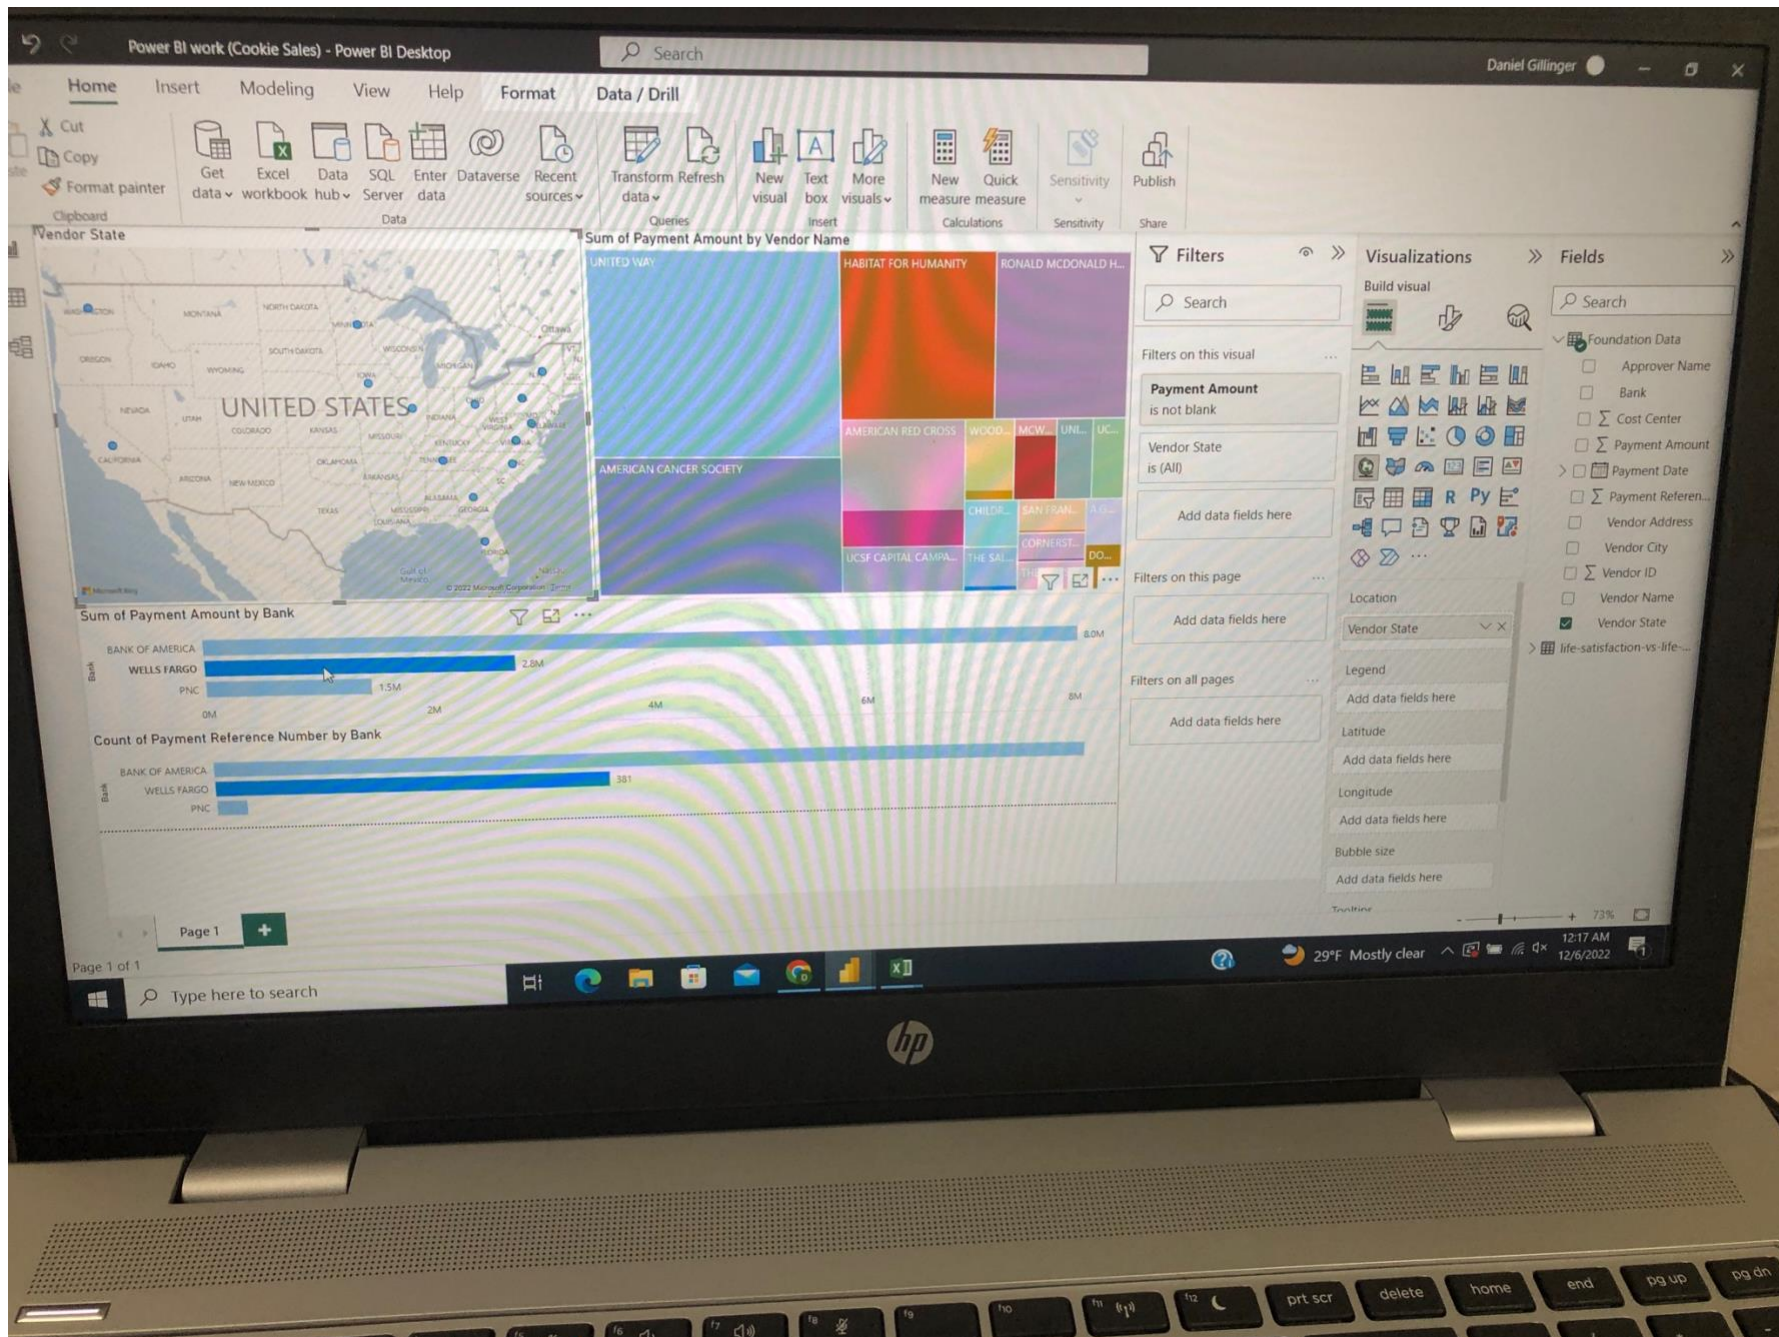

- United Way had the most money donated to them, the charity is located in Georgia, all of the transactions went through Bank of America (about \$2.4 million), and it was made over 19 transactions.

- Four of the charities with more than \$75,000 of donations from Julie's Cookies are in Georgia.
- The bar graphs show the portion of the money and transactions in the banks for all the charities in Georgia.

- Wells Fargo was used for transactions in 14 states.
- All of Habitat for Humanity's transactions were made through them.
- A portion of seven of the charities with donations above \$75,000 were made with transactions through Wells Fargo.
